I am a senior software engineer and team leader with over 6 years of experience delivering robust, scalable, and secure solutions for critical distributed systems. I work daily in English with high-performance international teams and build software that combines technical excellence with business impact.

At Kaizen Gaming, I am the team leader of the software engineers in the payments domain across Latin America, delivering integrations with financial providers in multiple countries and supporting platforms that generate billions in transaction value annually. In my current position, I am also leading the way with AI, agents, and skills, helping shape how these capabilities are applied in engineering.

Before that, at Ambev Tech, I led software development for the order management domain in Brazil, supporting one of the country's largest land logistics operations, which also moved billions in value.

Across both companies, I designed and evolved distributed systems with .NET, cloud, messaging, containers, observability, and strong engineering practices.

Experience

AUG 2024 – PRESENT

Senior Software Engineer Team Leader/Kaizen Gaming, Greece

Kaizen Gaming is a leading global gaming technology company headquartered in Greece and present in over 20 countries.

I am the team leader of the software engineers in the payments domain across Latin America, building integrations with financial providers and supporting products that generate billions in transaction value annually. The role combines technical leadership, cross-functional planning, team support, and execution in a highly regulated and high-availability environment.

I am also leading the way with AI, agents, and skills, helping drive practical adoption and new ways to increase engineering effectiveness.

The platform is built with C# / .NET using clean architecture and domain-driven design for Web APIs, workers, and scheduled jobs. The ecosystem includes SQL Server, Redis, HTTP, RabbitMQ, Red Hat OpenShift, Grafana, Prometheus, Graylog, CI/CD pipelines, automated testing, Jira, and GitLab.

JUL 2019 – AUG 2024

Senior Software Engineer Team Leader/Ambev Tech, Brazil

Ambev Tech is the technology hub of Ambev, part of the Anheuser-Busch InBev group.

I led software development for the order management domain in Brazil, ensuring orders were ready for invoicing and delivery in one of the country's largest land logistics operations. The products in

this domain also moved billions in value. I partnered with engineering and business stakeholders to plan priorities, drive execution, and support the technical growth of the development team.

I also led one of the company's first AI initiatives, using machine learning with neural networks to suggest order splitting automatically, reducing manual effort, time, and operational cost without sacrificing logistics efficiency.

The platform used C# / .NET with clean architecture and domain-driven design for Web APIs, workers, and scheduled jobs, with MongoDB, PostgreSQL, SQL Server, gRPC, HTTP, RabbitMQ, Service Bus, AKS, KEDA, Datadog, SonarQube, Snyk, and Azure DevOps.

Education

2019 – 2021

[Specialization, Data Science/FURB, Brazil](#)

2016 – 2018

[Undergraduate, Systems Analysis and Development/SENAI, Brazil](#)

Licenses & Certifications

- AZ-204T00--A: Developing Solutions for Microsoft Azure, Microsoft
- Microsoft Certified: Azure Fundamentals, Microsoft
- English Level (C2 Proficient), EF Standard English Test (EF SET)
